Introduction

Give a brief introduction of the research question(s), and how you will answer them.

Data

Import the data and describe it. Include below a brief written interpretation.

```
# Load data  
df <- read.csv("datasets/fictional_data.csv")
```

Analysis

Describe how you analysed the data. You can embed R outputs directly in your text, for example, the mean of university level education is 3.53 years.

Present a relevant visualization for the distribution of income.

Include some analysis of how confident we can be about our estimate for the population mean.

Is there a relationship between education and income?

Conclusion

What is your main finding? What weaknesses might there be in your research? What further analyses are needed?
